To Whom It May Concern,

**Re: M. J. Dixon Construction Ltd.**

Dixon Construction completed three projects for Humber College's North Campus in the summer of 2002 and in the winter of 2002 / 2003 with a total construction budget of approximately \$1.5 million. The first two projects were Interior Renovations to accommodate Classrooms, Computer and Construction Labs. The third project completed in the beginning of 2003 was a 2500 square foot addition and renovation for the Canadian Plastic's Training Centre at Humber College. I was the project architect responsible for all of these projects.

Humber College required that the construction be completed outside the academic year. Dixon Construction met the time frame dictated by the College and successfully completed all projects before classes resumed.

I can recommend both Paul Chiang who was the Project Manager, and Harry Hergaarden who was the Site Supervisor on the Canadian Plastic's Training Centre. Their hard work and diligent attention to detail instilled confidence and assurance that the project would be a success. Both individuals were able to respond to site conditions as they arose and provided initiative in reaching the best solutions possible.

Should you wish to discuss this recommendation further, please call me at any time.

Yours Sincerely,

A handwritten signature in black ink, appearing to read 'PH', with a long horizontal flourish extending to the right.
